

2025 consultation

Submission type	Guided submission
Submitter	George Mercier
Response ID	277367

Disclaimer

This document is a submission to the Net Zero Commission's 2025 consultation. As part of the consultation process, the commission has committed to publishing the submissions it receives. Submissions do not represent the views of the commission.

2025 consultation questions

1. What can you tell us about your experience of the impacts of climate change and how can the commission seek to reflect and respond to this in its work?	I have lived for over six decades and i can tell that the summers are getting more unbearable. i spend four months of the year in great discomfort being in severe heat stress. i don't have adequate housing (i live in a van down backstreets) and no access to air conditioning. many days i feel sick and that i am going to die. if we can't fix the climate then you need to make cool housing available for those of us who are vulnerable.
2. What actions can the commission take to engage across the community to help drive the shifts needed for the net zero transition and for effective climate change mitigation and adaptation?	get to a hundred percent renewables and greater uptake of electric vehicles and stop burning our coal and gas either in australia or elsewhere asap. this can be done with a public education process. let the public know how much we have progressed on renewable energy and also let them know how damaging fossil fuels are.
3. How should the commission best engage with First Nations people to learn about cultural knowledge and practices to support adaptation, and what information and evidence should it draw on to inform its understanding of these practices?	education
4. What additional mechanisms, support, or incentives can meaningfully empower and enhance First Nations people's involvement in climate mitigation, adaptation and environmental stewardship?	education and information
5. What additional information and evidence should the commission consider when assessing progress towards NSW's targets for reducing net greenhouse gas emissions?	you need to realise that you will be opposed by evil people who do not care about the environment or their fellow humans. the Inp party and the murdoch media in particular are the enemies of good. the commission needs to engage experts who can advise how to deal with these difficult and evil people in these organisations.
6. The speed of deployment of electricity generation and infrastructure is a key	engage a progressive well known celebrity (who personally favours the clean energy revolution) to be the public face and cheerleader for the cause. this person would have the task to get on the airwaves and spruke and rally the public to pursue the

risk to emissions reduction targets. What more could be done to fast-track deployment?	climb to a hundred percent renewables. this would have a ongoing positive influence on the renewable industry and investment and media acceptance of the renewable rollout.
7. Are the measures now in place sufficient to ensure community engagement and benefit sharing from the build out of infrastructure for the energy transition?	no. the people are not quite sure if the clean energy rollout is rolling along happily or slovenly. that is why we need a celebrity spokesperson to gee things up.
8. Are First Nations communities adequately engaged and included in sharing the benefits of the transition? What more could be done, and by whom?	the celebrity spokesperson could have a favourable first nation assistant.
9. What are likely to prove the most effective approaches to accelerate rapid decarbonisation across freight and passenger transport?	<p>1. build elaborate electric truck charging stations at the appropriate truck resting points along the most frequented highway in australia (the highway between melbourne-sydney-brisbane. at the very least to do an 'intention to build model' showing what this will look like and what you are about to build. this will allow those wishing to purchase an electric truck to go ahead and outlay the capital knowing that the charging stations will be in place very soon.</p> <p>2. being an electric vehicle driver the charging system is absolutely pathetic and expensive. what we need is for the intermediate charging system (7-22kw) to be run by councils and positioned (at least 6 in a row) in suburbs and towns within proximity to every post office which would allow them to be evenly located across the city and regional areas. these chargers would be unmetered and free to use but requiring a yearly fee (a windscreen sticker indicating payment and a fine for using without paying) paid to the federal government which would then reimburse the councils for their electricity expenditure. the unregulated private charging companies at the moment are charging too much for their usage and ripping us off. the private sector should not be the only ones involved -the government must run this intermediate service and create a reliable affordable charging system and until this happens then the ev uptake will be slow.</p>
10. What specific actions or policies could increase uptake of emissions reduction strategies in agriculture, both in the short and long term?	tell agriculturalists that they are to phase out the use of fossil fuels by a certain year -that would incentivise the development of alternative fuels. eg hydrogen etc
11. Given the uncertainties in land-	i'm not sure

sector net emissions, how should NSW incorporate this sector into the states climate policy and emissions profile?	
12. What specific actions could increase carbon storage and resilience of the existing carbon stock in the land sector and meaningfully enhance the application of First Nations people's knowledge and practices?	not sure
13. What policies or programs at a sectoral level could complement the Safeguard Mechanism to support the accelerated decarbonisation of heavy industry in NSW?	just give them a year by which they must be at zero emissions.
14. What measures could accelerate industrial heat electrification in NSW, where technology is viable?	again -give them a time limit.
15. What short to medium term measures could be prioritised to address the systemic challenges regarding waste generation and resource recovery?	give them time limited guidelines
16. How could transparency of how coal mines meet their Safeguard Mechanism obligations be improved?	not sure
17. What measures would lead to coal mines prioritising on-site abatement over offsetting?	not sure
18. What measures should be considered beyond the Safeguard Mechanism to reduce emissions of the	not sure

resources sector, particularly methane emissions, to meet NSW's emissions reduction targets?	
19. What additional measures could accelerate electrification and increase energy efficiency of new and existing buildings?	<p>1. all new buildings must have batteries (large) and solar (compulsory) included Asap as well as five star insulation ratings.</p> <p>2. established buildings can be retrofitted wherever possible. they should be also given a time frame to have batteries and solar installed and fined for non compliance.</p>
20. How could social equity be better addressed in the transition to an electrified built environment?	the poor/battlers must be compensated by government subsidies and schemes.
21. What approaches could NSW consider to eliminate refrigerants with a GWP >10 from buildings?	ban them and give a time frame for compliance.
22. What should be included in an emissions monitoring framework for NSW in the context of the transition to net zero, including any specific metrics and indicators?	not sure
23. The adaptation objective is for NSW to be more resilient to a changing climate. The Act allows for regulations to further define the adaptation objective. What does a more resilient NSW look like to you?	who knows -humans are so unpredictable.
24. What additional information and evidence should the commission consider when assessing progress towards the adaptation objective?	not sure
25. How can adaptation planning better use the NSW Government's climate change projections (NARClIM)?	not sure
26. What other information or tools are	<div></div> <div></div>

<p>needed to support decision-makers in NSW?</p>	<p>[REDACTED]</p>
<p>27. What initiatives should the commission consider in assessing NSW's preparation and responses to extreme heat and humidity events in NSW?</p>	<p>create places for heat/humidity affected people to go to and be cared for - probably located inside hospitals and special clinics.</p>
<p>Are there any other pieces of evidence or feedback you would like to add?</p>	<p>you should showcase (by commissioning a series of tv documentaries) homes and businesses that have achieved a high level of power efficiency or independence so as to show people how clean energy is being done and is not just a pipe dream.</p>
